

Europe's Migration Crisis

MU-Data Science Capstone

Spring 2018 | John Mataya

This presentation describes the migration crisis affecting Europe and recommends how to respond

We'll Define the Problem by Asking the Following Questions:

Is the crisis over or evolving?

Where do migrants come from?

How do migrants get to Europe?

Where do migrants go in Europe?

Are there humanitarian issues to consider?

Recommendations:

What types of data science tools can we employ?

WHAT'S THE DIFFERENCE BETWEEN A REFUGEE AND AN ASYLUM SEEKER?

Asylum seeker

- Individual who is seeking international protection
- someone whose claim has not yet been finally decided on by the country in which he or she has submitted it
- Not every asylum seeker will ultimately be recognized as a refugee, but every refugee is initially an asylum seeker.

Refugee

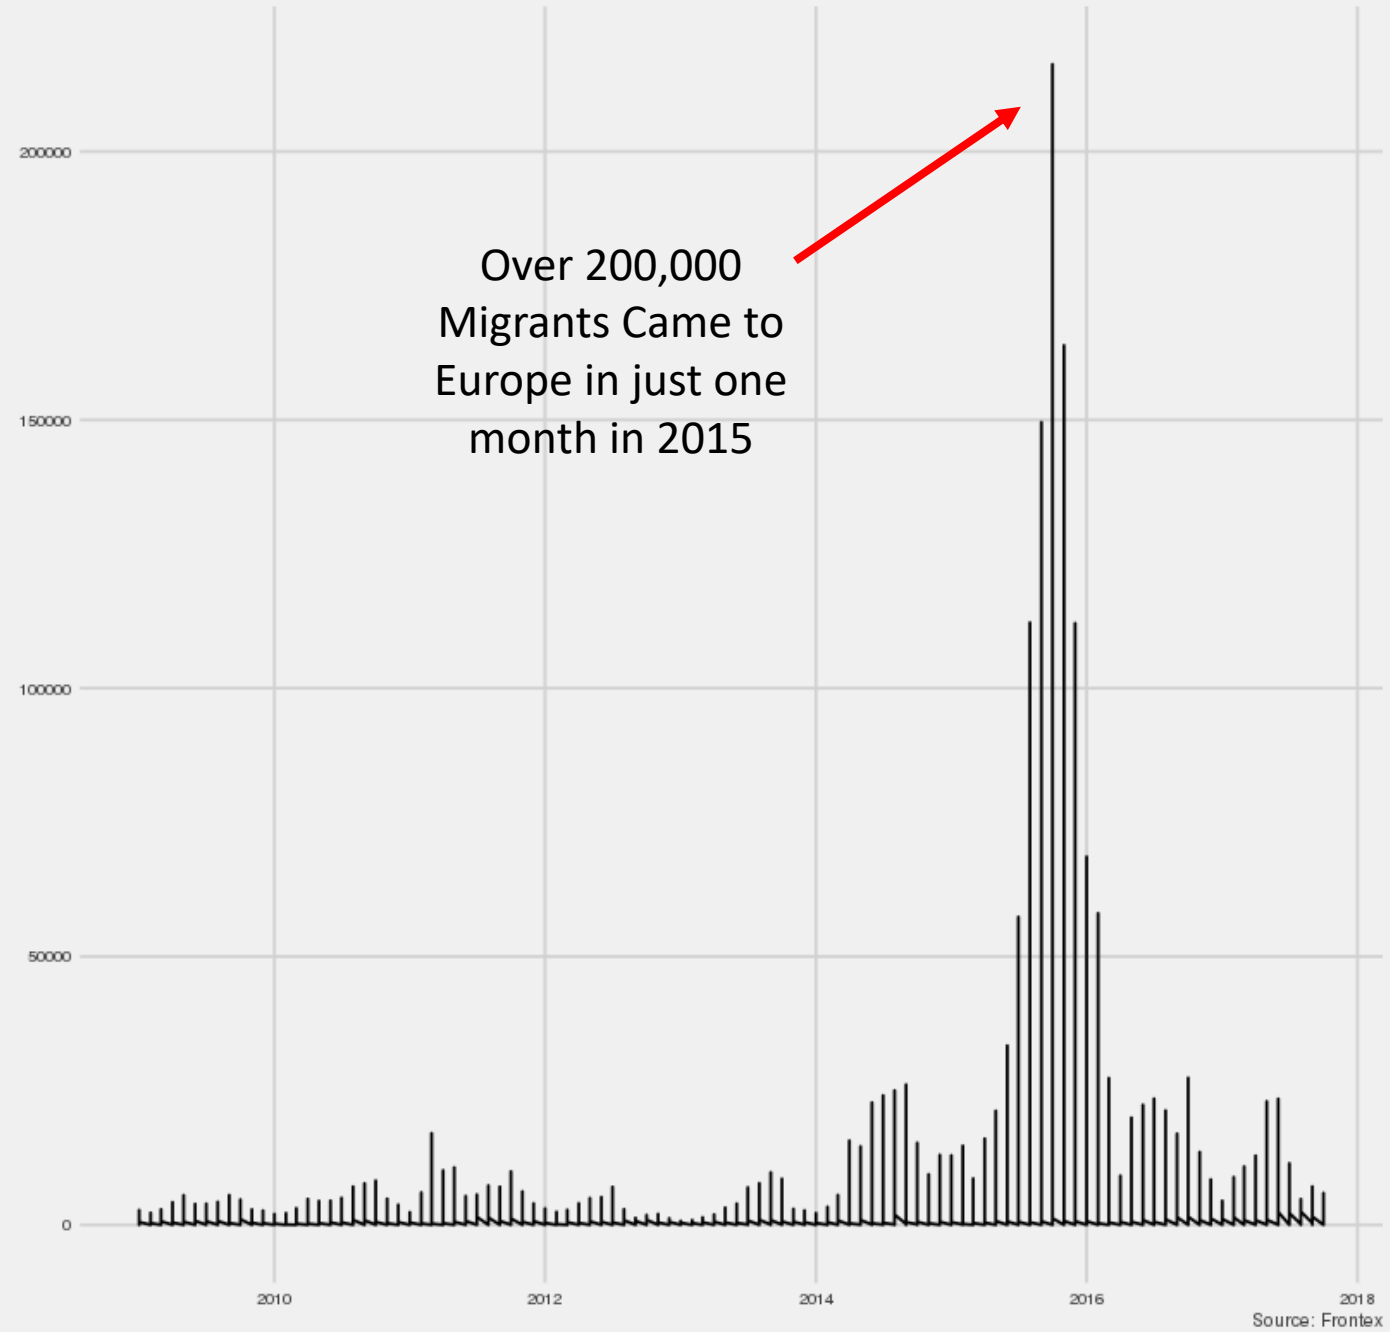

- Refugees are specifically defined and protected in international law
- When people flee their own country and seek sanctuary in another country, they apply for asylum – the right to be recognized as a refugee and receive legal protection and material assistance.

An aerial photograph of a small boat, likely a rubber dinghy, packed with hundreds of migrants. The boat is moving through dark blue water, leaving a white wake. The migrants are seen from above, wearing various colorful clothing. The boat is oriented vertically, with the bow at the top.

EUROPE WITNESSED AN EXPLOSION OF MIGRATION STARTING IN 2015

Migrants Traveling to Europe by Date

Top 10 Migrants to Europe by Nationality

Shown in Thousands

**SINCE, 2012
SYRIANS
REPRESENT THE
LARGEST SHARE
OF MIGRANTS
COMING TO
EUROPE**

Why are Syrians Coming to Europe?

The ongoing civil conflict in Syria has generated one the world's worst migrant crisis on record. UNHCR estimates more than 5 million Syrians have been displaced to other countries and nearly 6.3 million Syrians have been internally displaced.

**After 7 years the Syrian conflict
rages on with no end in sight**

Which European Countries are Most Affected by Syrians Fleeing to Europe?

So Are Most Syrians Coming to Europe?

The image features a central white banner with the text 'So Are Most Syrians Coming to Europe?' in bold black font. Above the banner, there is a silhouette of a large crowd of people standing in front of a line of trees. Below the banner, there is a silhouette of a group of people, including men, women, and children, walking and carrying large bags and suitcases, suggesting they are refugees or migrants.

Turkey, Lebanon, and Jordan accept the largest number of Syrian Refugees

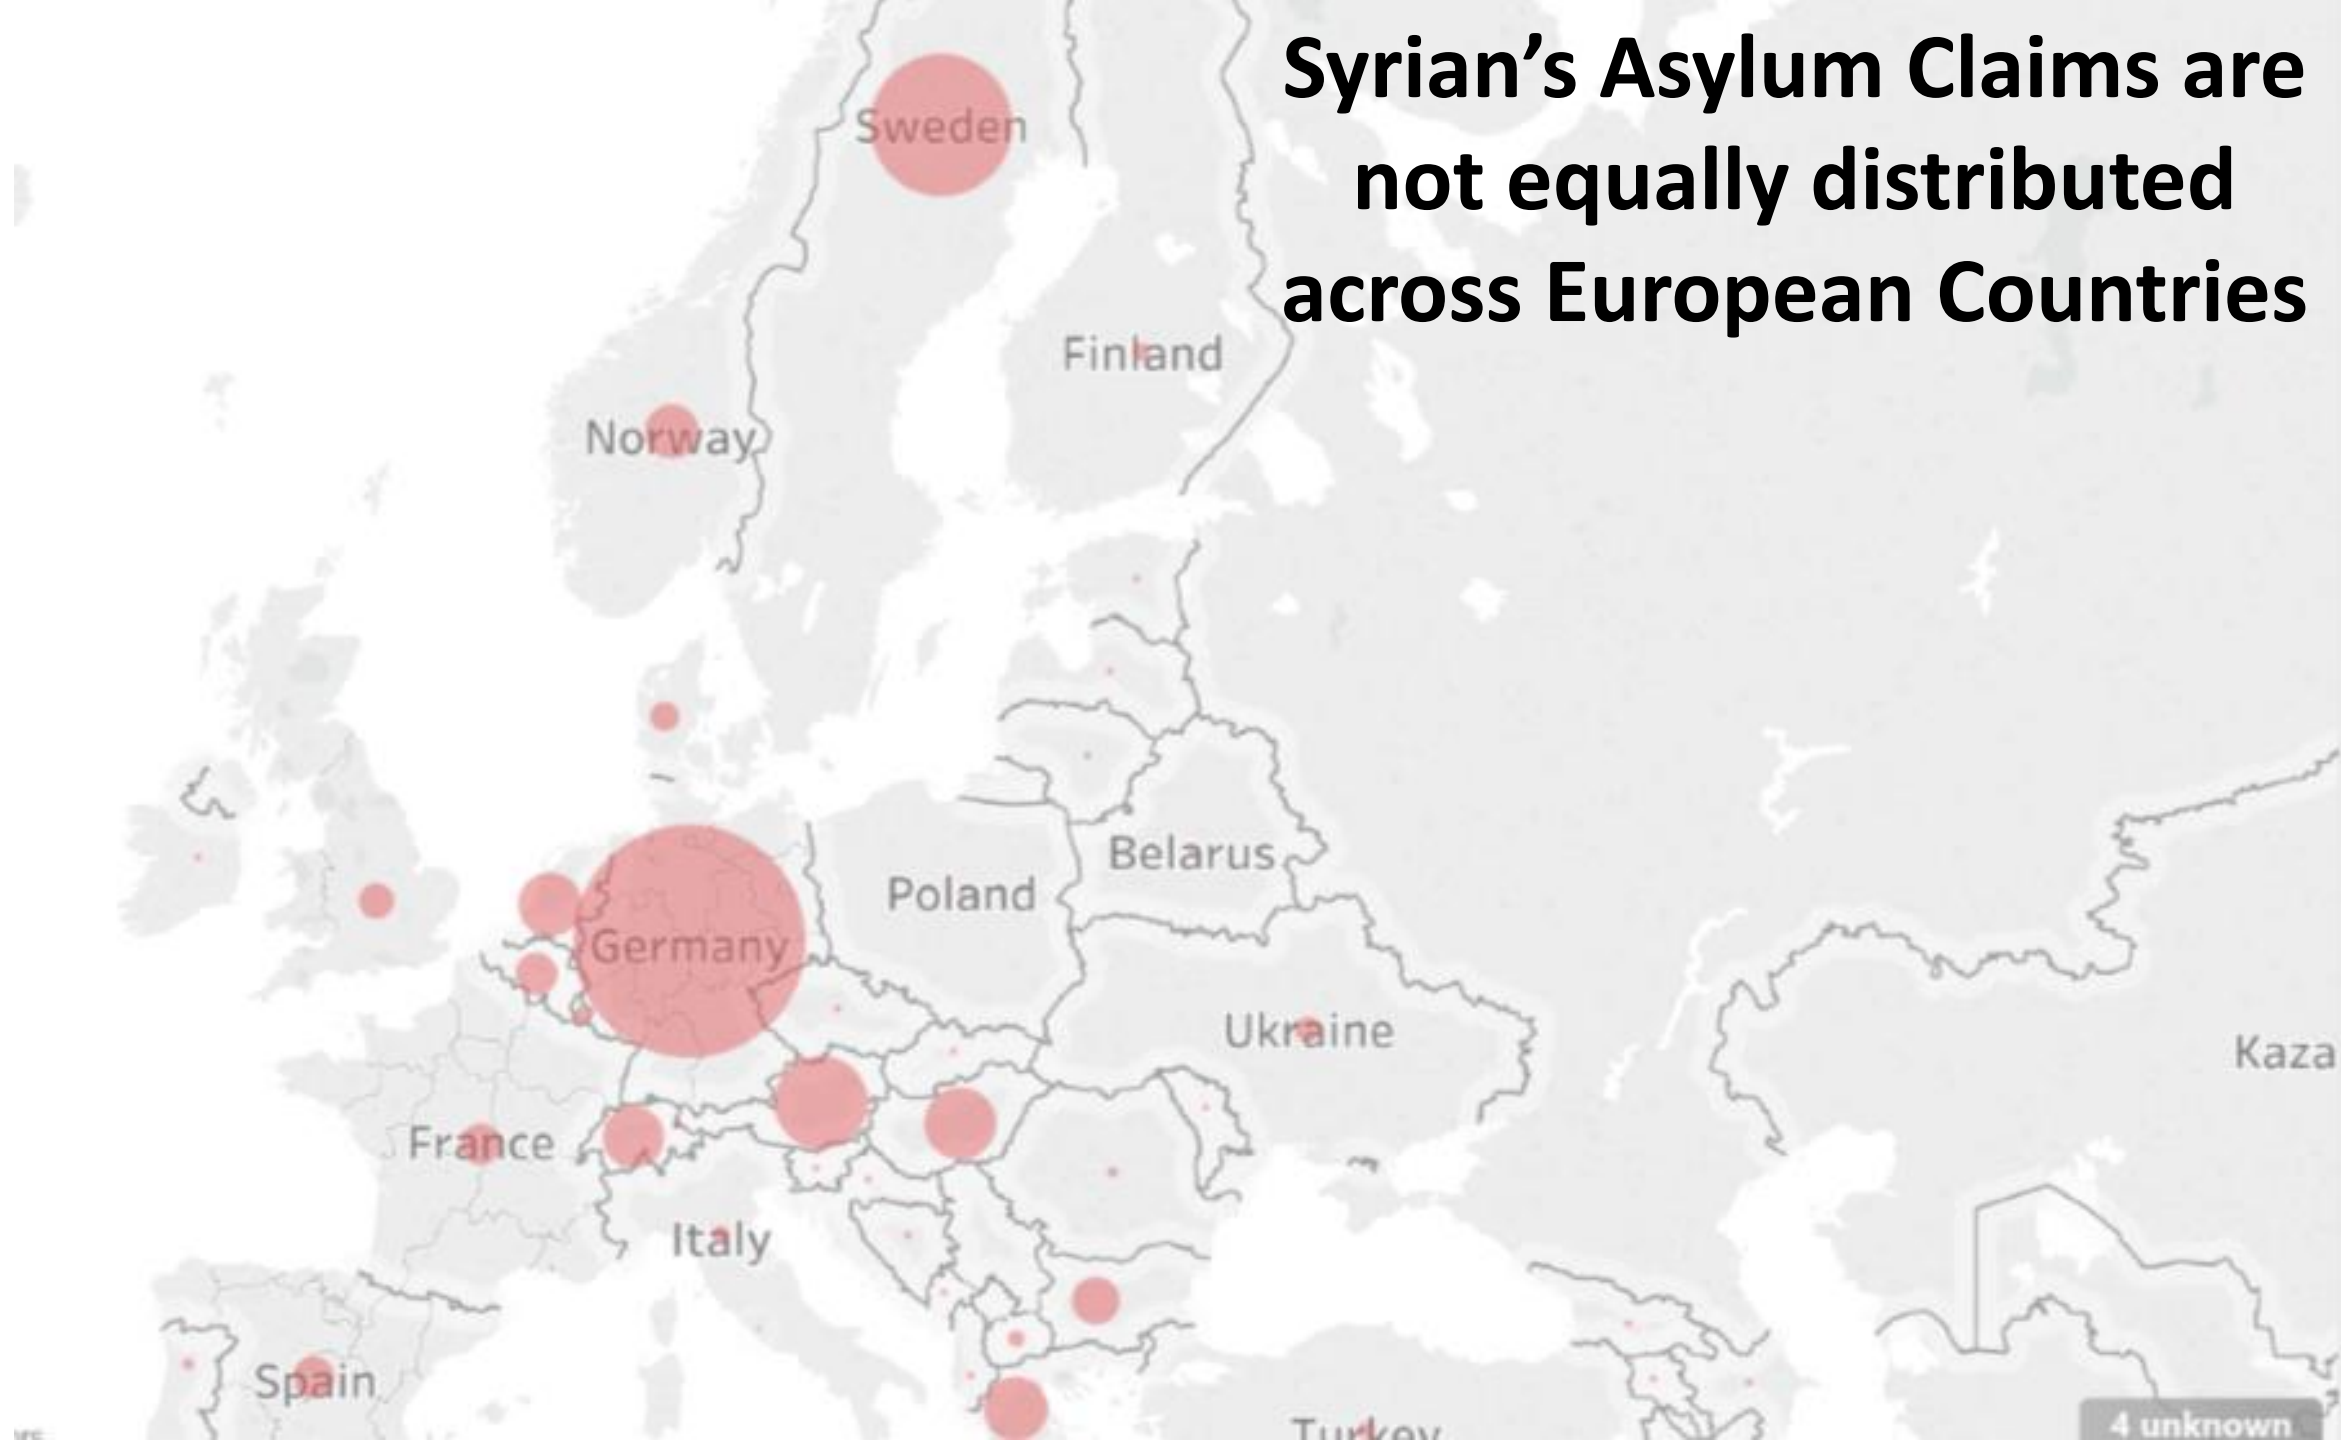

Source: UNHCR

Country. Color shows details about Country. Size shows Number of Records and Refugees. The marks are labeled by Country.

**Germany, Sweden, Austria,
and Hungary have more
Syrians Seeking Asylum than
anywhere in the Europe**

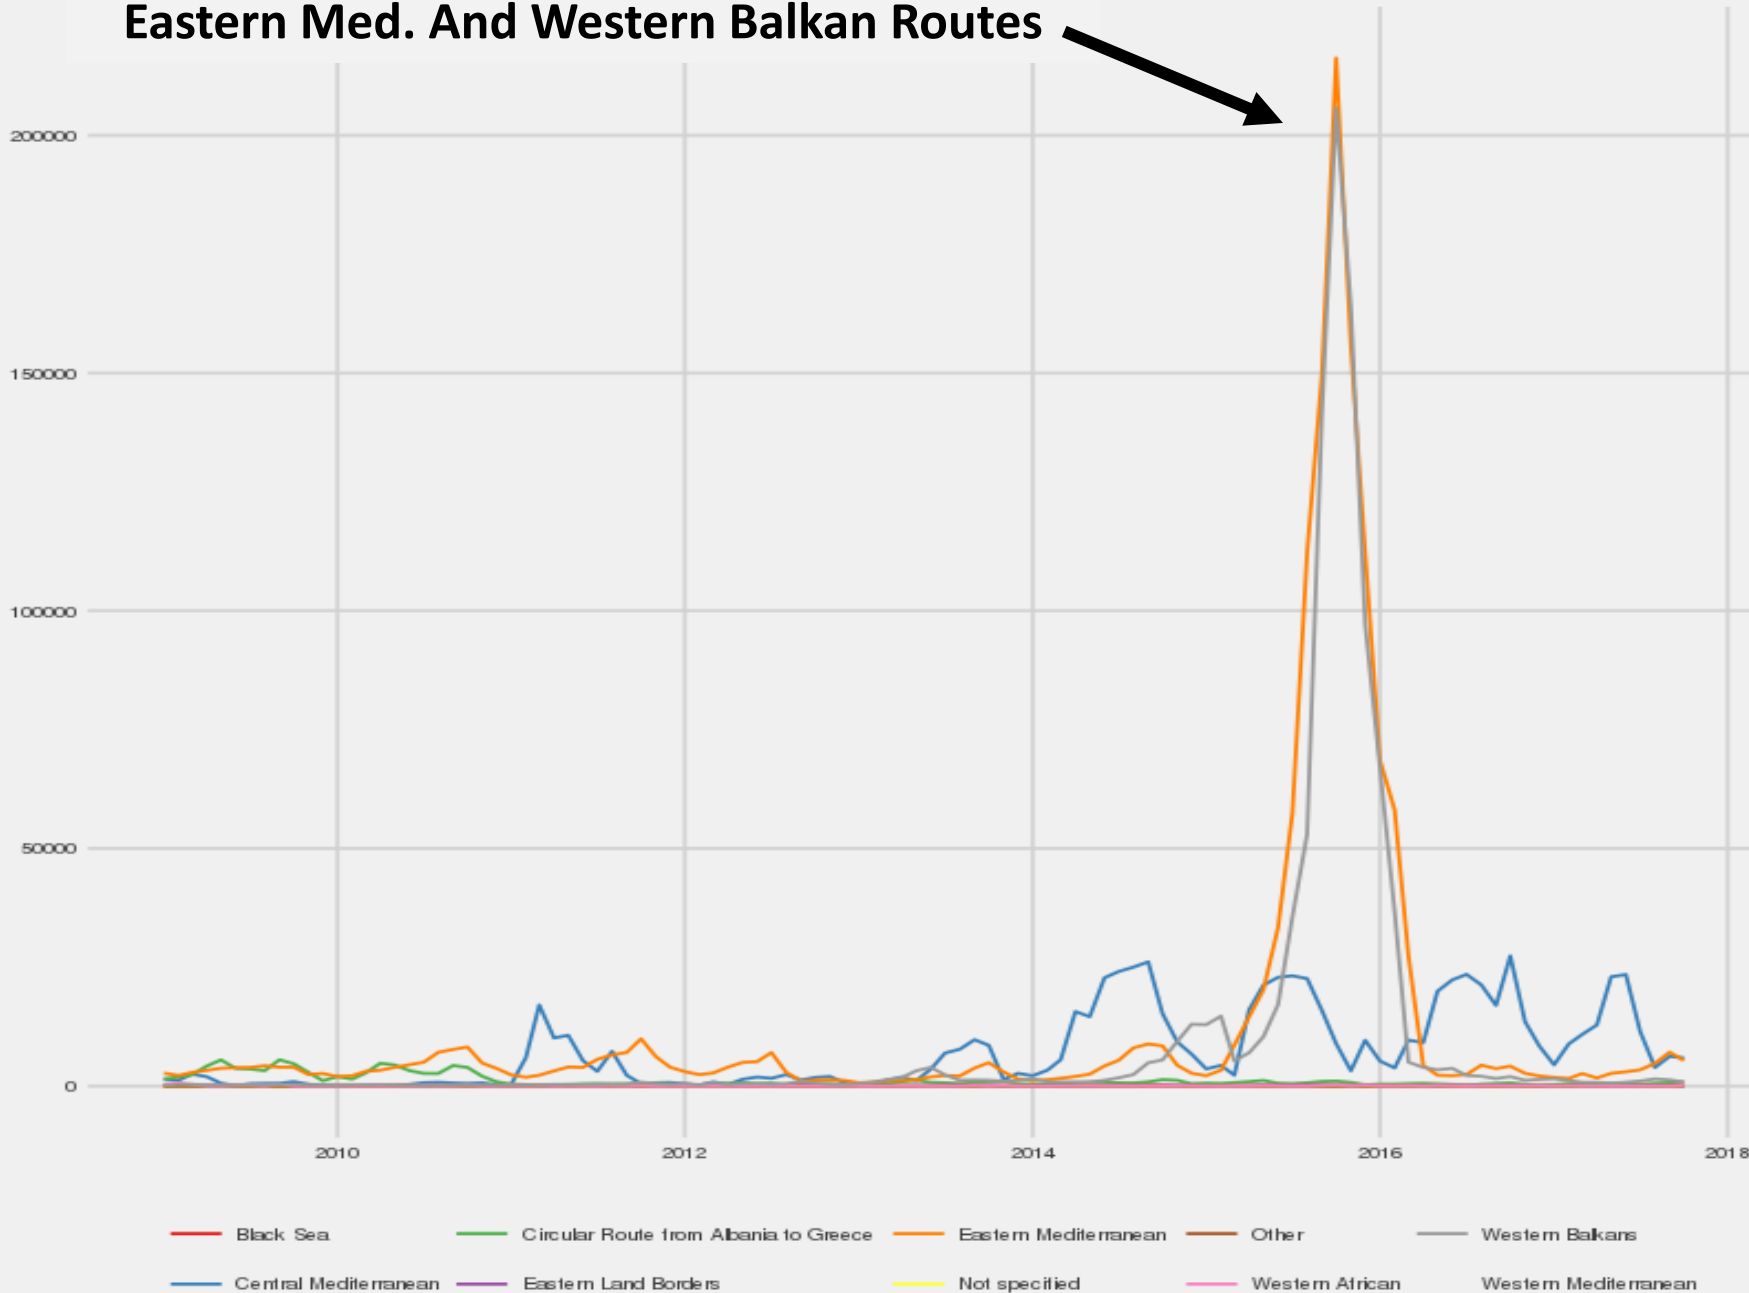

Syrian's Asylum Claims are not equally distributed across European Countries

How Do Syrian Migrants get to Europe?

Eastern Med. And Western Balkan Routes

In 2015, Migrants poured into Europe via the East. Med and Western Balkan Routes

Routes used by Countries with Largest Share of Migrants Coming to Europe

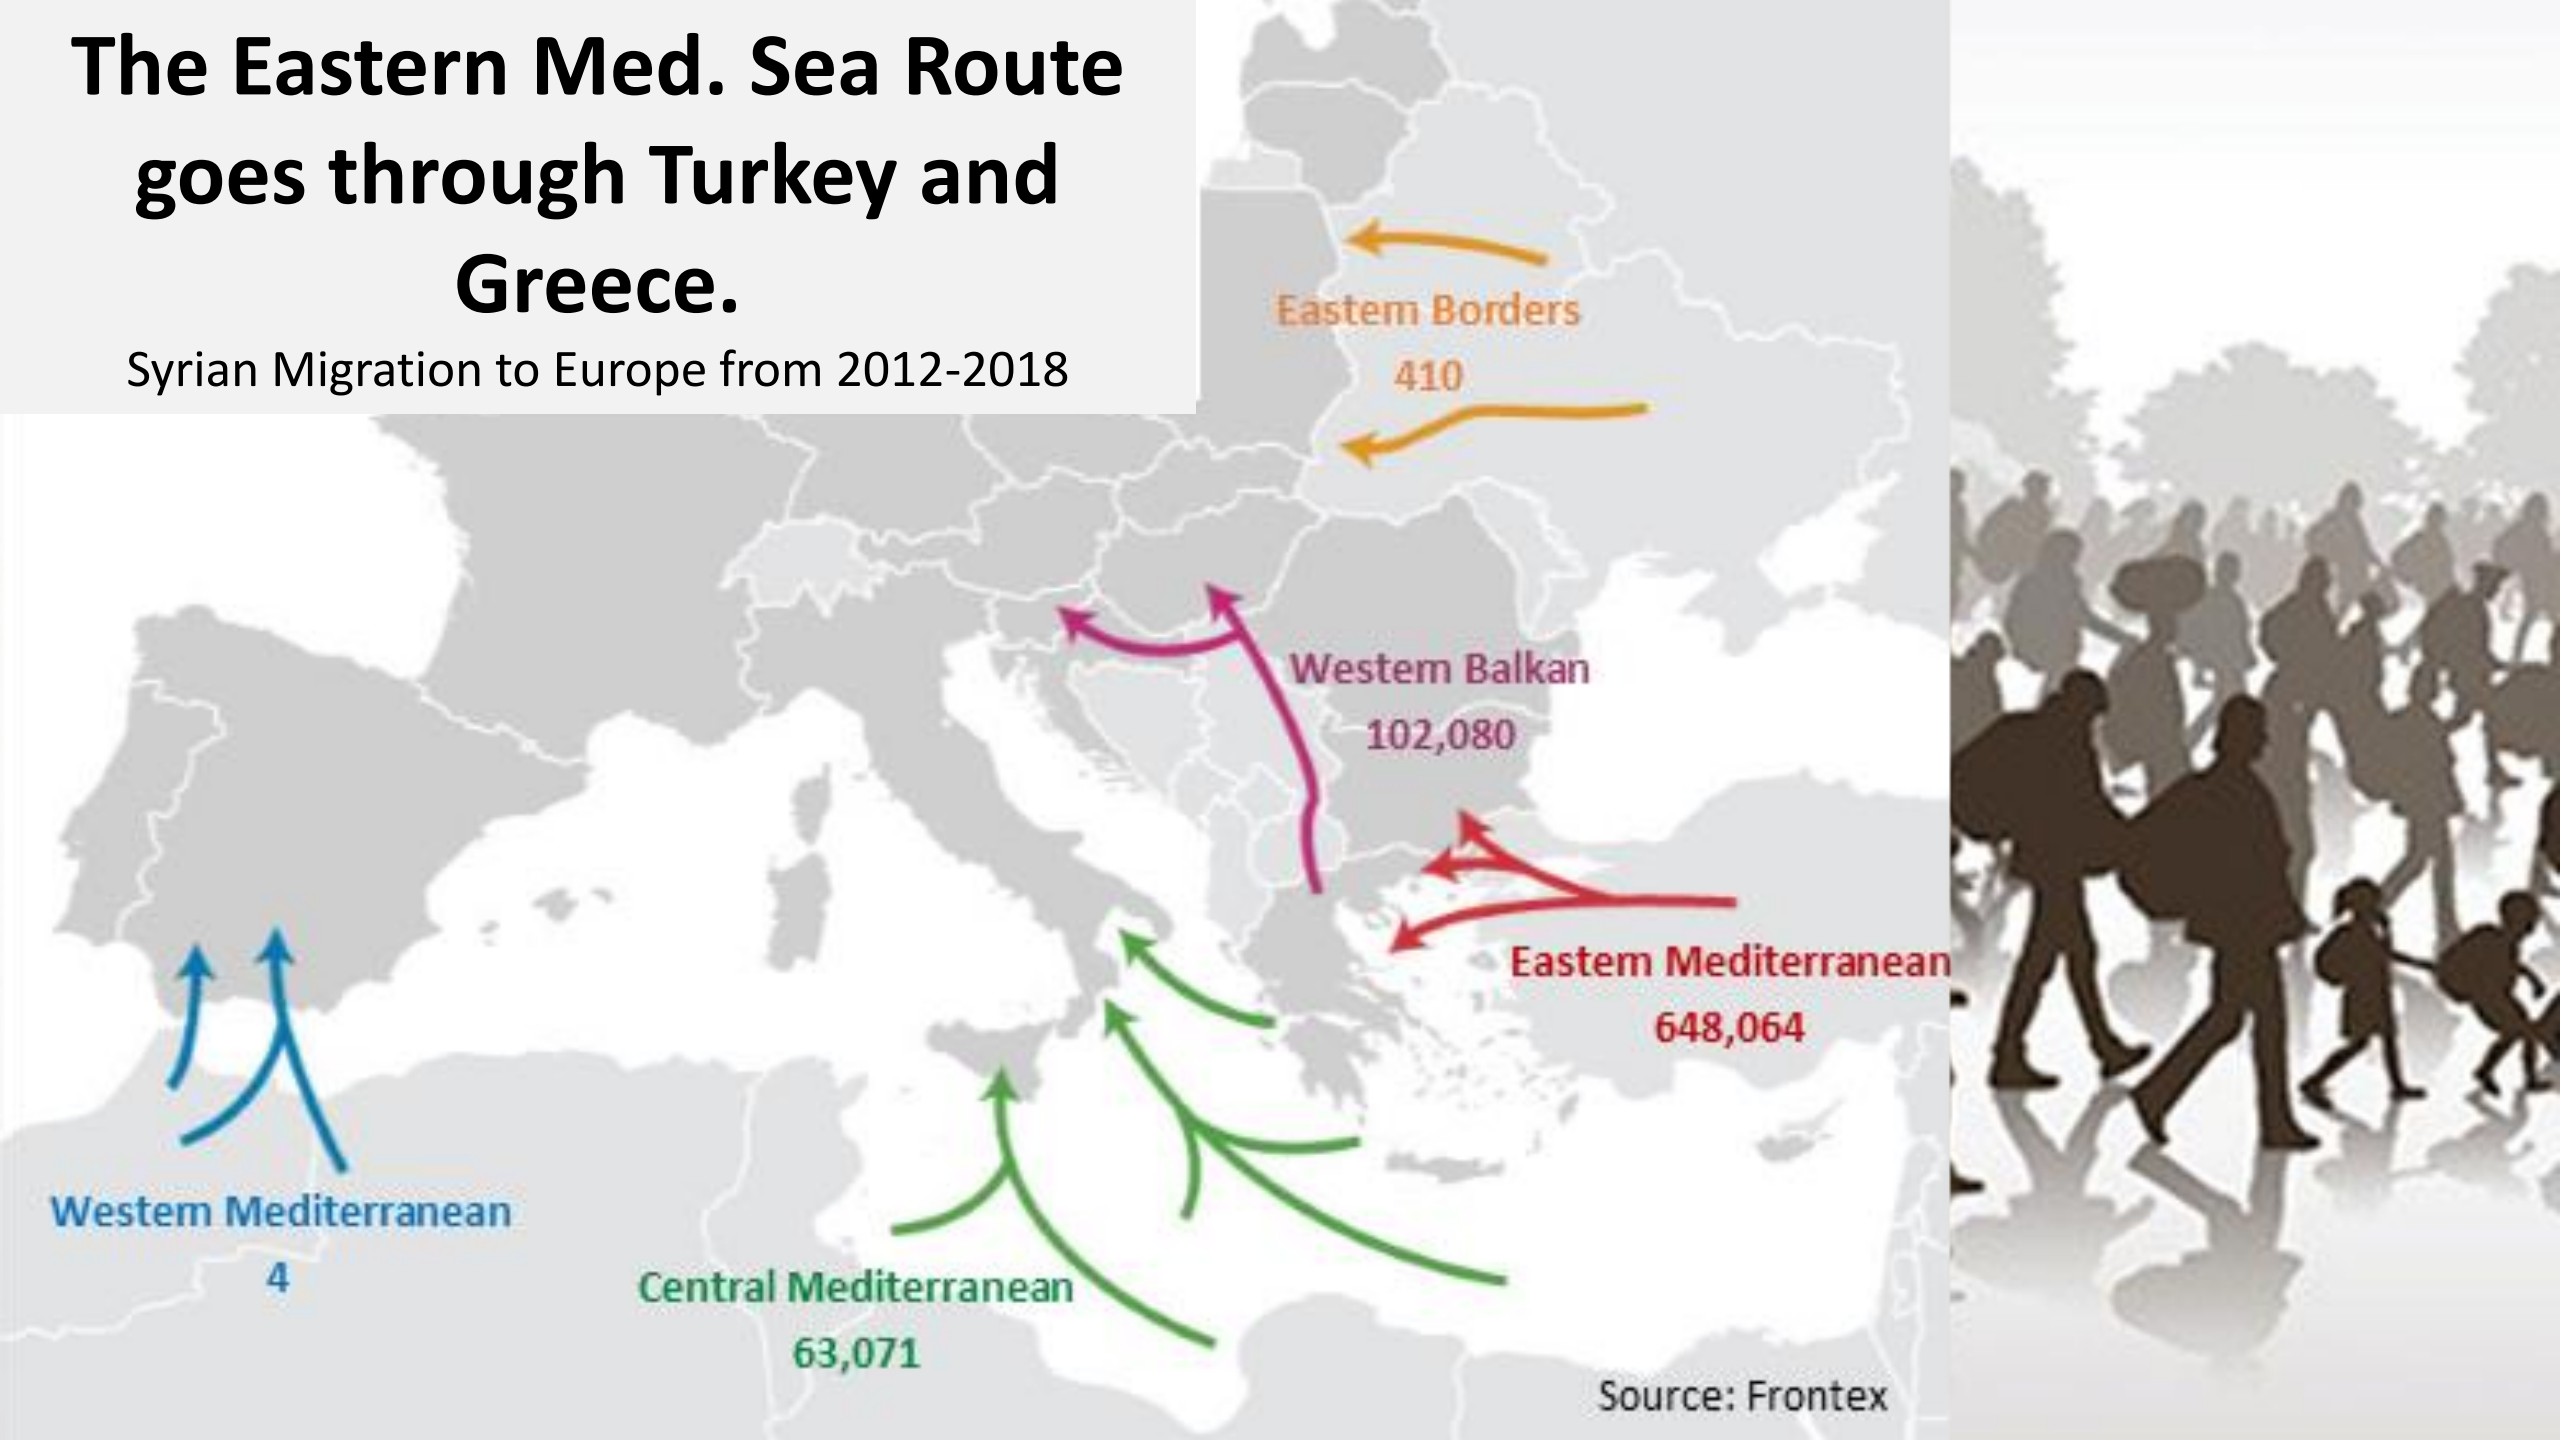

Syrian's largely use the Eastern Med. Sea Route

Source: Frontex

The Eastern Med. Sea Route goes through Turkey and Greece.

Syrian Migration to Europe from 2012-2018

What are the humanitarian costs?

Mediterranean Sea is a Dangerous Place for Migrants

Nearly 15,000 migrants have gone missing or perished in the Mediterranean Sea since 2014

Migrant Deaths per 100,000 Migrants by Region

Dates:
2014-2018

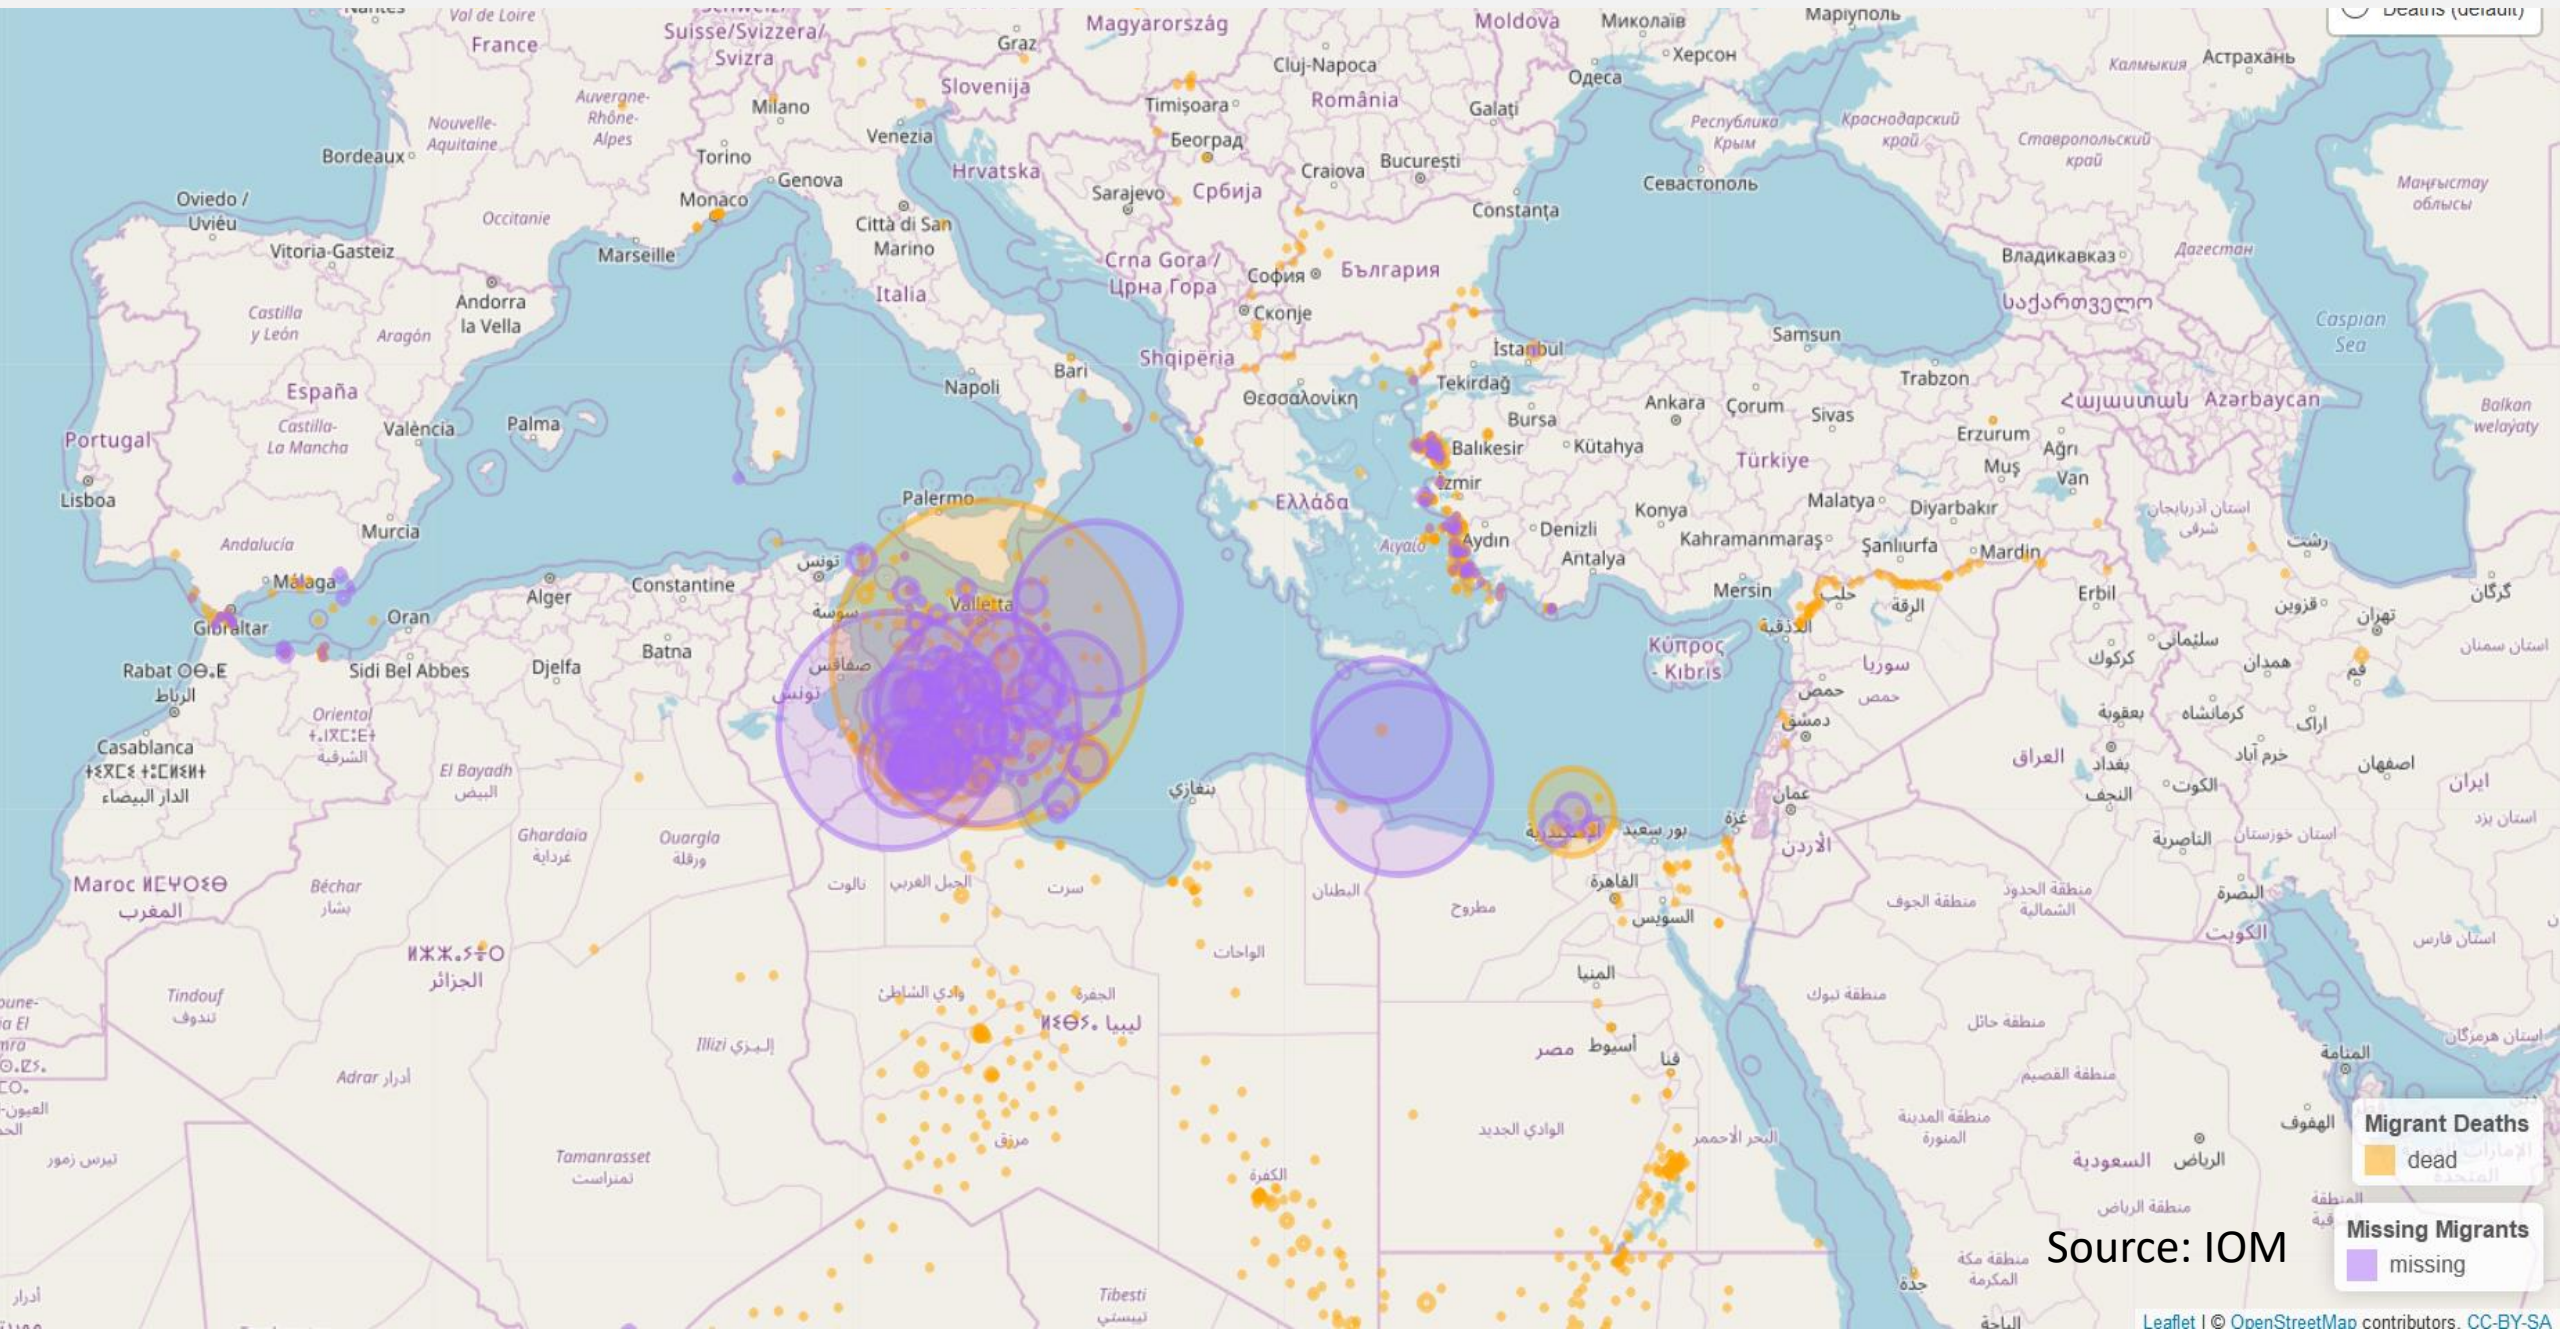

Source: IOM

Missing Persons per 100,000 Migrants by Region

Migrants Reported Missing and Dead 2014-2018

Deadly Routes for Syrian Migrants

cause_death

Accident	Drowning	Medical	Vehicle Accident
Asphyxiation	Exhaustion, Starvation, Dehydration, Exposure	Unknown	Violence, Assault, Murder

The Most Deadly Route for Syrian Migrants is the Central Med. Route

What's recommended?

Observations

- **Most Syrian refugees remain in the Middle Eastern Countries surrounding Syria**
- **Most Syrian Asylum cases are not equally distributed throughout Europe**
- **Most Refugees travel to Europe via the Eastern Mediterranean and Western Balkans**
- **There's a large number of deaths and missing persons on the Central Mediterranean Sea Route to Europe**
- **Europe may still be open to another migration crisis. The conflict in Syria is still ongoing and the Middle East could see another civil crisis causing migrants to come to Europe**

Additional Observation

BBC
NEWS

In 2016 the EU and Turkey Struck a Deal to Stop the Flow of Illegal Migrants coming to Europe

- **Returns:** All "irregular migrants" crossing from Turkey into Greece from 20 March will be sent back. Each arrival will be individually assessed by the Greek authorities.
- **One-for-one:** For each Syrian returned to Turkey, a Syrian migrant will be resettled in the EU. Priority will be given to those who have not tried to illegally enter the EU and the number is capped at 72,000.
- **Visa restrictions:** Turkish nationals should have access to the Schengen passport-free zone by June. This will not apply to non-Schengen countries like Britain.
- **Financial aid:** The EU is to speed up the allocation of €3bn (\$3.3 bn; £2.3 bn) in aid to Turkey to help migrants.

EU-Turkey Agreement Implemented After March 2016

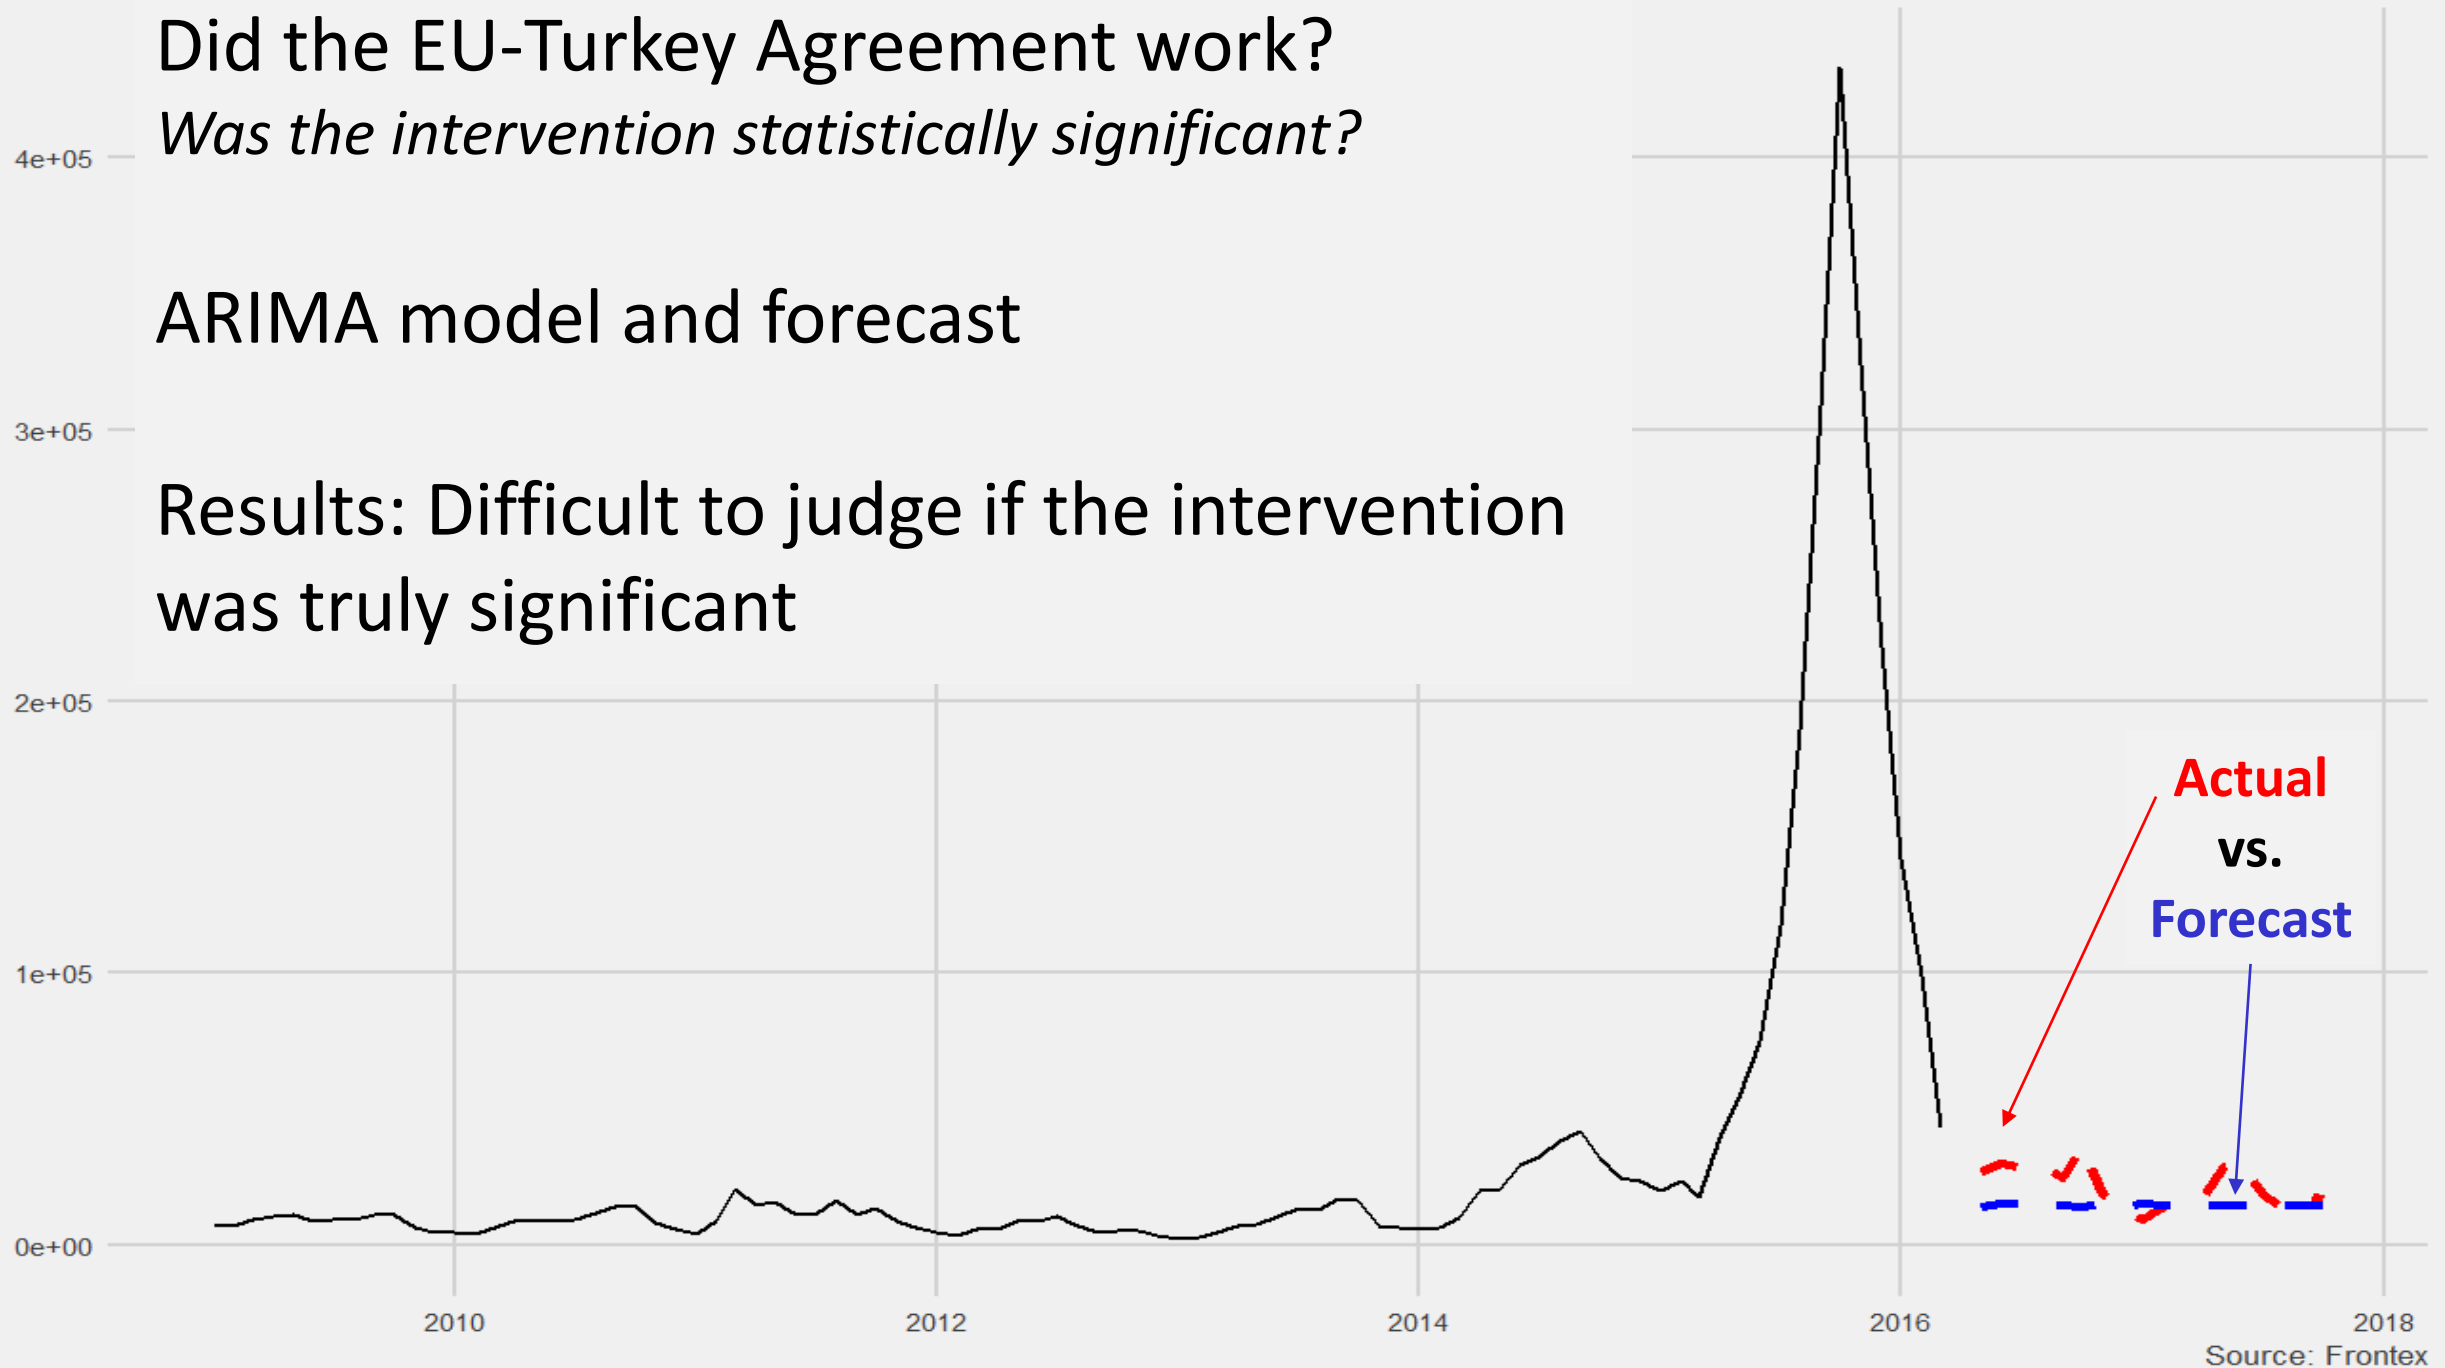

**The Agreement
Seems to be
Working**

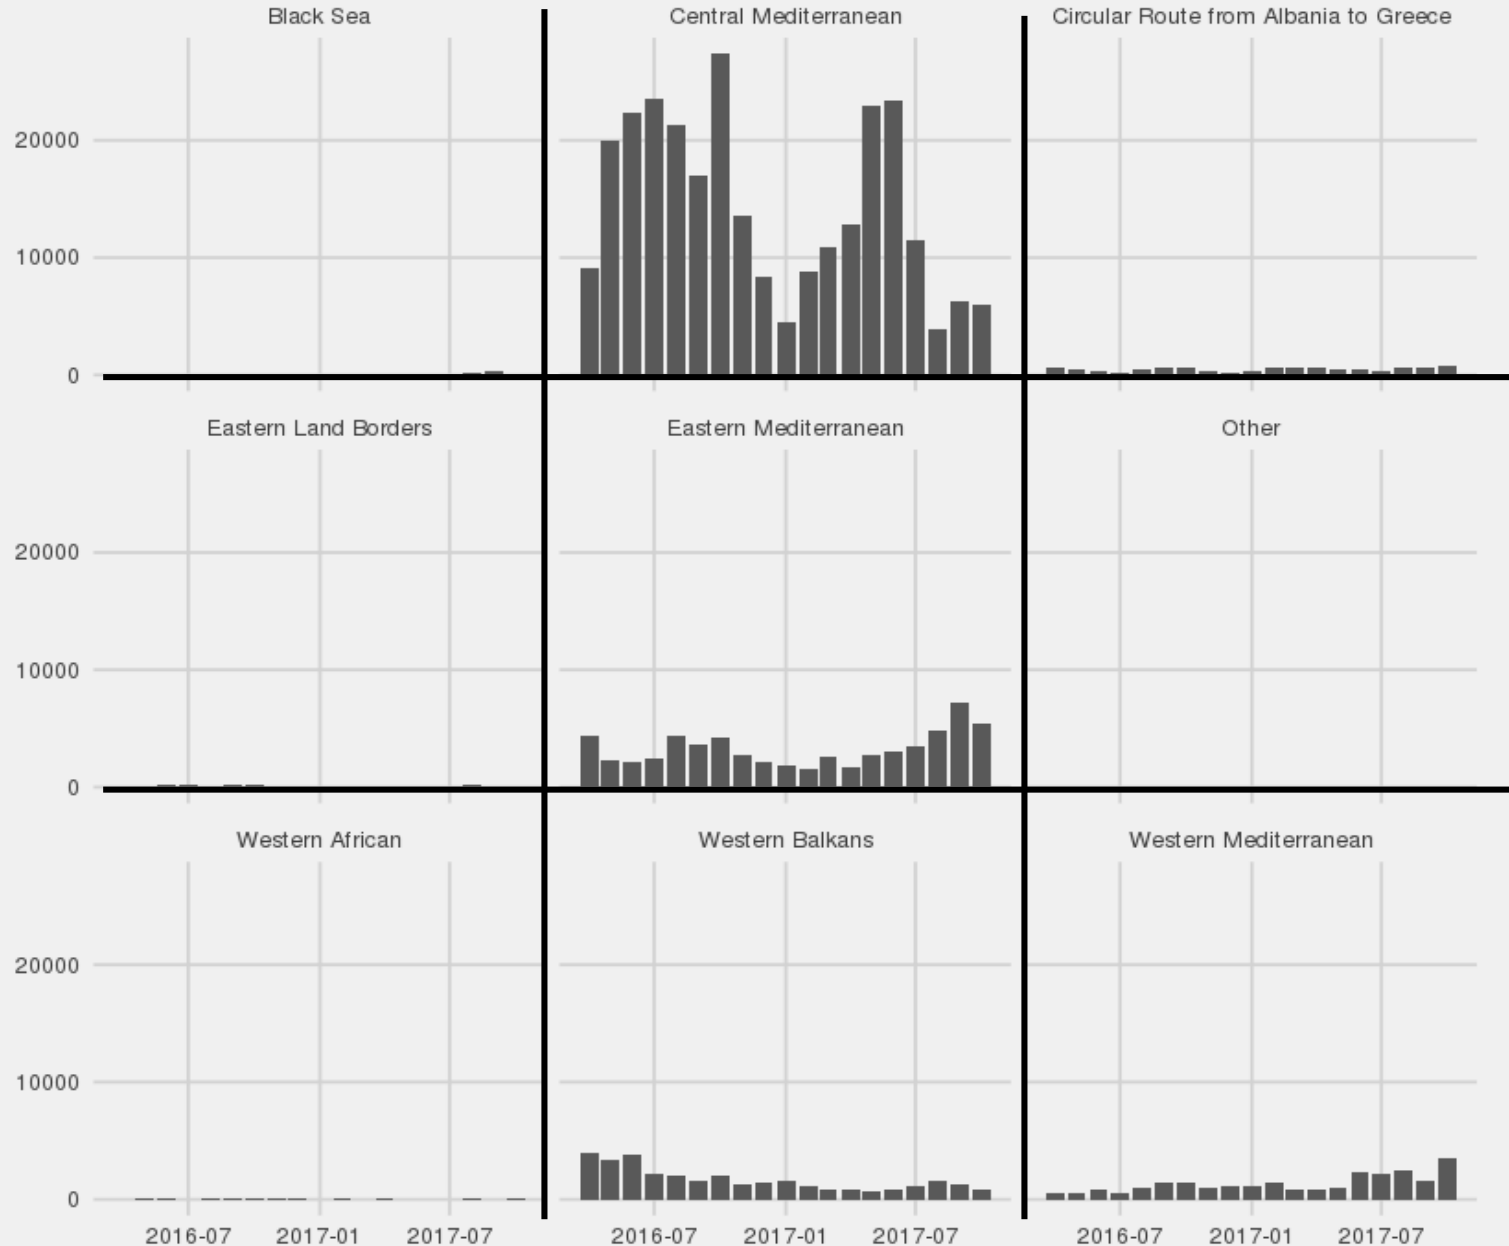

Did the EU-Turkey Agreement work?
Was the intervention statistically significant?

ARIMA model and forecast

Results: Difficult to judge if the intervention
was truly significant

Illegal Border Crossing to Europe by Route After EU-Turkey Agreement

Source: Frontex

Q: What Happened After the EU-Turkey Agreement?

A: Migration via Turkey appears to have slowed

Most Migration to Europe is now happening via the Central Med. Route

Number of Migrants Illegally Traveling to Europe by Origin and Route After EU-Turkey Agreement

Source: Frontex

Q: Who's Coming to Europe After the EU-Turkey Agreement and how are they getting to Europe?

A: Central Med. Route. Africans and Syrians

Observations Revised

- **Migration via the Eastern Mediterranean and Western Balkans has slowed since the EU-Turkey agreement in 2016**
- **Since the EU-Turkey Agreement, most migrants heading to Europe are using the Central Med. Route**
- **Most Syrian refugees remain in the Middle Eastern Countries surrounding Syria**
- **Refugees making it to Europe and claiming Asylum are NOT being distributed equally throughout Europe**
- **There's essentially a humanitarian crisis in the Mediterranean Sea where migrants drown coming to Europe**
- **Europe may still be open to another migration crisis. The conflict in Syria is still ongoing and the Middle East could see another civil crisis causing migrants to come to Europe**

Given the Situation What's Recommended?

Recommendations:

- 1) Focus Asylum Screening and
- 2) Humanitarian Aid to “hotspots” with Refugees

Starting Point:
Refugee Camps

Recommendation 3

Europe should act together to equally distribute Asylum seekers throughout EU Countries

Top European Countries with Syrian Refugees and Asylum Seekers in 2016

Source: UNHCR

Recommendation 3

- **Most Syrians are claiming asylum in Germany**
- **Europe can do more to share the burden**

**How Can Machine Learning Help to
Implement these Recommendations?**

What are the possibilities?

Implementing the Recommendations

ML Possibilities

- Discovery of new refugee camps
- Monitoring of refugee camps for approximate size (changes)

An aerial photograph of a vast, arid landscape filled with numerous small, white, tent-like structures arranged in organized rows, representing a large-scale refugee settlement. The terrain is dry and brown, with some sparse vegetation in the distance.

Implementation Challenges

Most Syrian migrants are not found in refugee camps

Only a limited number of official refugee camps are officially sanctioned by countries hosting Syrian refugees. In turn, it is not always clear where refugee/migrant settlements are located.

Lebanon has no official refugee camps and hosts nearly 1.5 million refugees. This creates challenges when focusing resources to “hotspots”

The multidimensional Syrian conflict quickly displaces people across borders

Implementing Recommendations:

1) Focus Asylum Screening and
2) Humanitarian Aid to “hotspots” with Refugees

Starting Point:
Refugee Camps

Data Needed for Implementation?

Satellite Images

Implement Recommendation 1 and 2 by Building an Image Classifier

Discovery of Camps: Classification Problem

Refugee Camp

Non Camp

Image Processing and Classification

Original Image

Create Image Chips

Camp

Noncamp

Key Features

- **Tent Dominated Areas**
- **Edges/Clear Borders**
- **White Areas**
- **Outside of Cities or Developed Areas**

Data Augmentation

- Limited Data
Required a Data
Augmentation
Approach
- Rotate Images

Evaluation Results

	Precision	Recall	F1-score	Support
Refugee Camp	0.90	0.82	0.86	11
Noncamp	0.95	0.97	0.96	39
Avg/Total	0.94	0.94	0.94	50

Limits to the Model

Model Prediction:
Refugee Camp

Model Prediction:
Non Camp

Model Prediction:
Refugee Camp

Limits to the Model

Important Disclaimers

Small Data Set Limited ability to...

- do cross validation
- Evaluation results could be very different on larger data set

There are relatively few refugee camps that actually exist. This creates a challenge forcing us to deal with limited data. In some ways, the problem is like predicting fraud where we are dealing with a rare event.

Conclusions and Final Thoughts

1) Real World Application Challenges

2) The limits of Geography

- Middle East Climate
- Semi Urban Areas

3) Data Science Next Steps

- Estimate Camp Populations/Size

END
